

TECHSHIP INTERNSHIP

Day 6- Introduction to Next.js

Submitted By : Kelna Sebastian

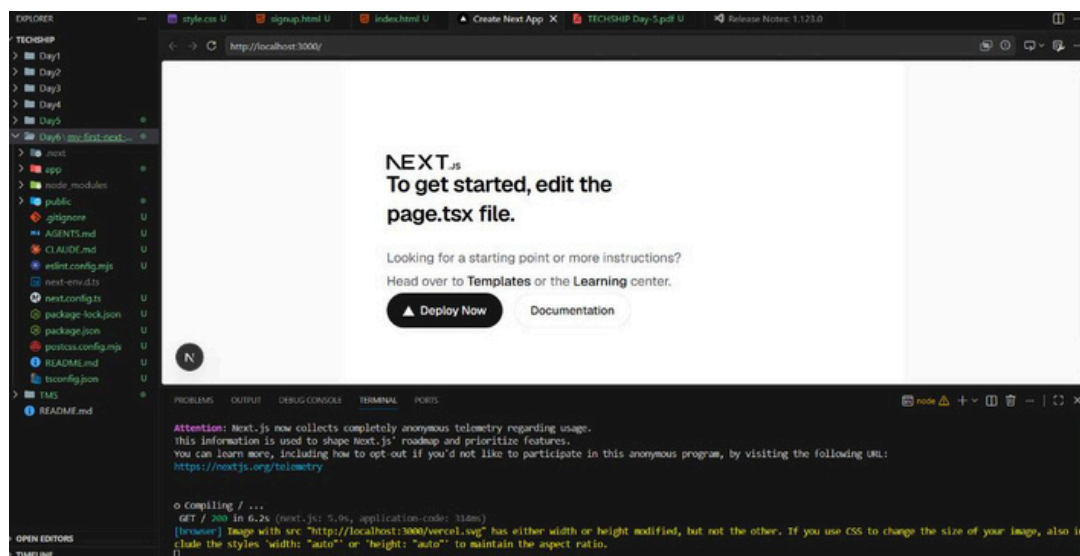

Date : 08-06-2026

During this activity, I learned the basics of Next.js and how it helps in building modern web applications. I understood how to create a Next.js project using create-next-app, how pages are organized, and how components can be reused to make development easier.

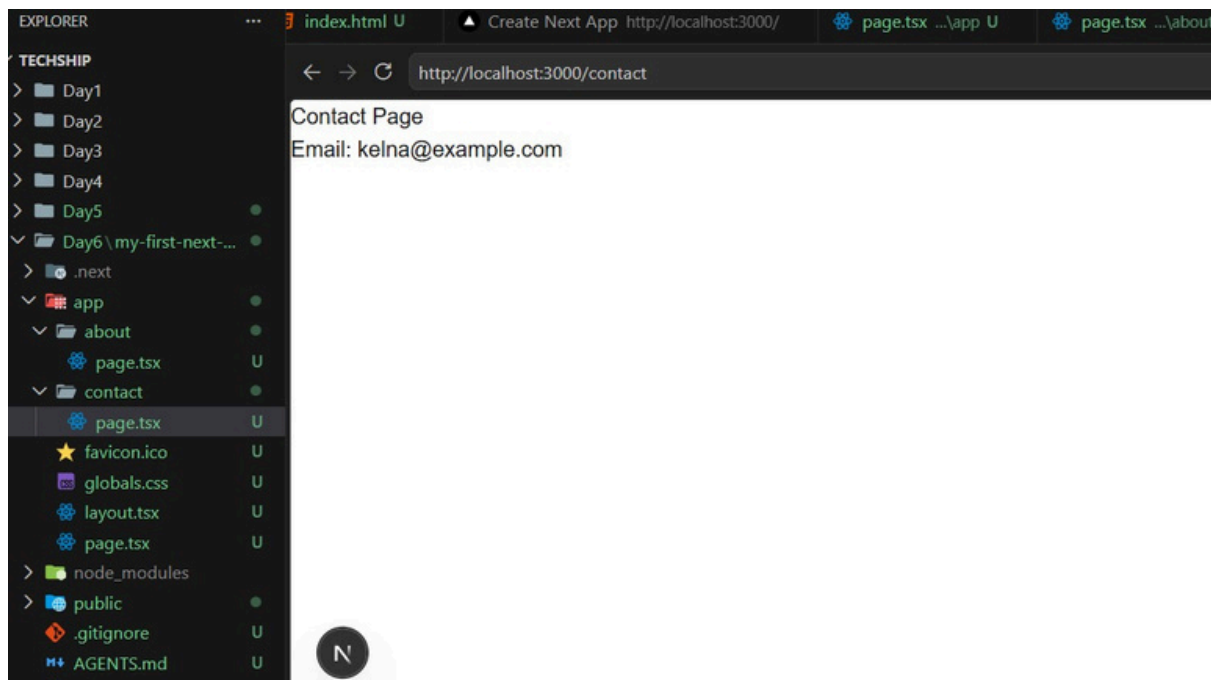

I also learned that Next.js is different from traditional web development because it provides a structured framework on top of React. Instead of manually creating and linking multiple HTML files, Next.js uses a file-based routing system and offers features such as server-side rendering and better performance.

The main challenge I faced was setting up the project correctly. Since I was new to Next.js, I had to understand where to run commands, how the project folders are organized, and how dependencies are installed. However, after completing the setup, I gained confidence in working with Next.js projects.

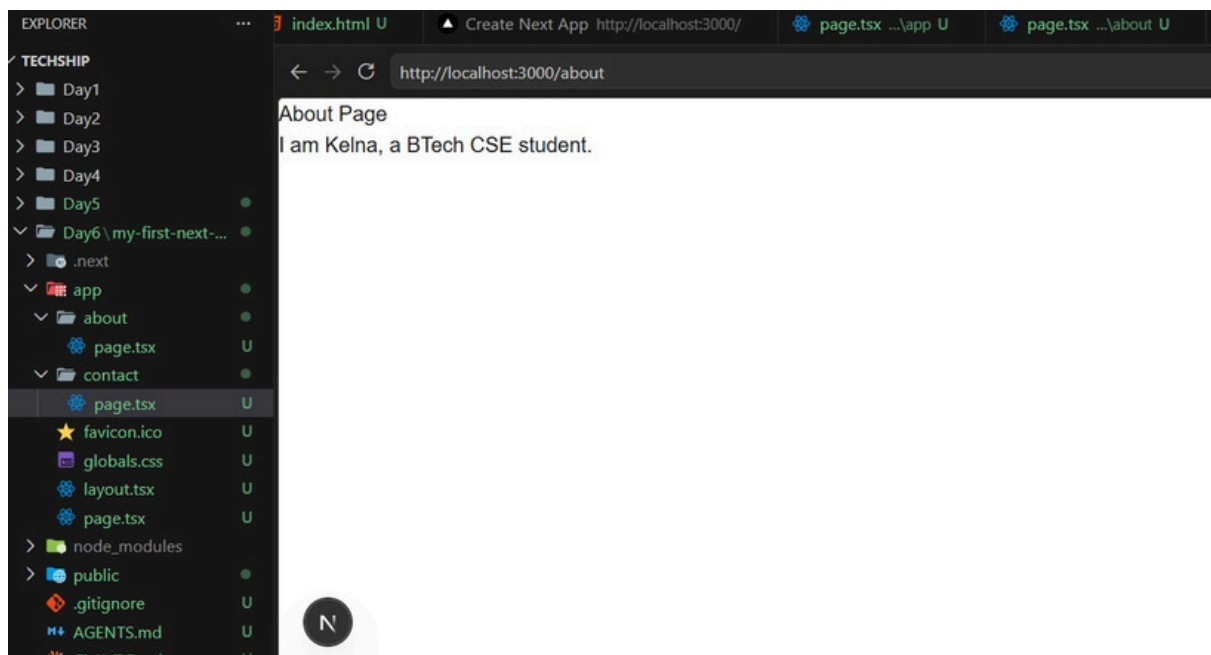

Activity 1-Create your First Next.js Application

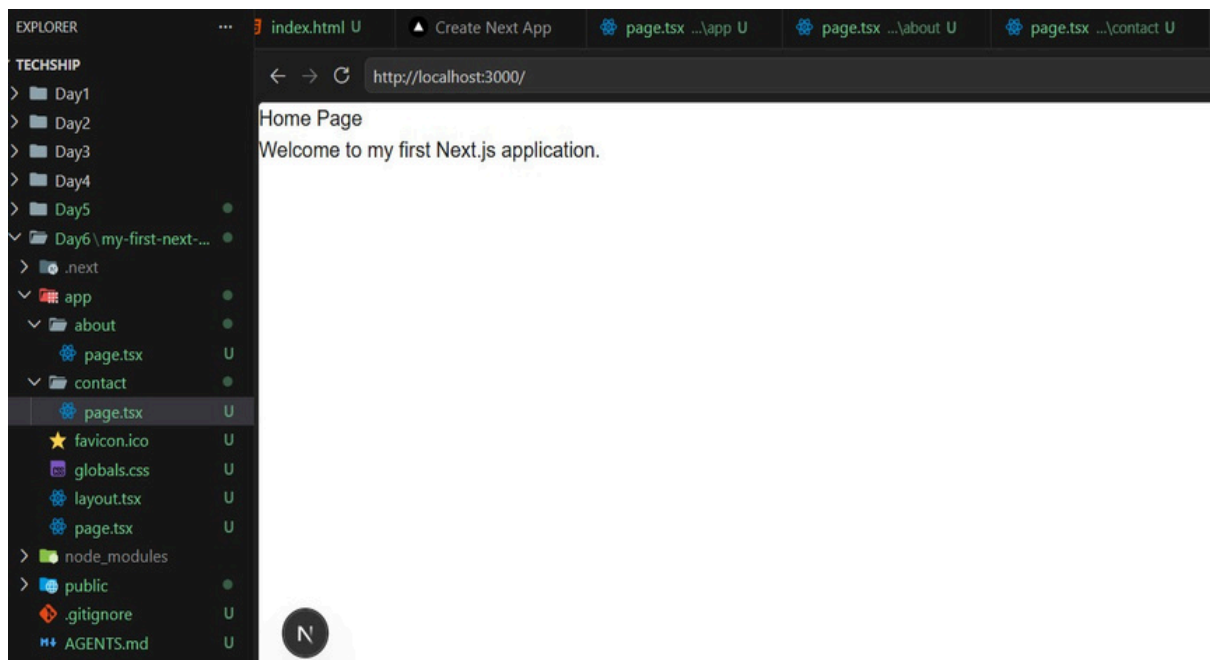

Activity 2-Create Multiple Pages

Contact page

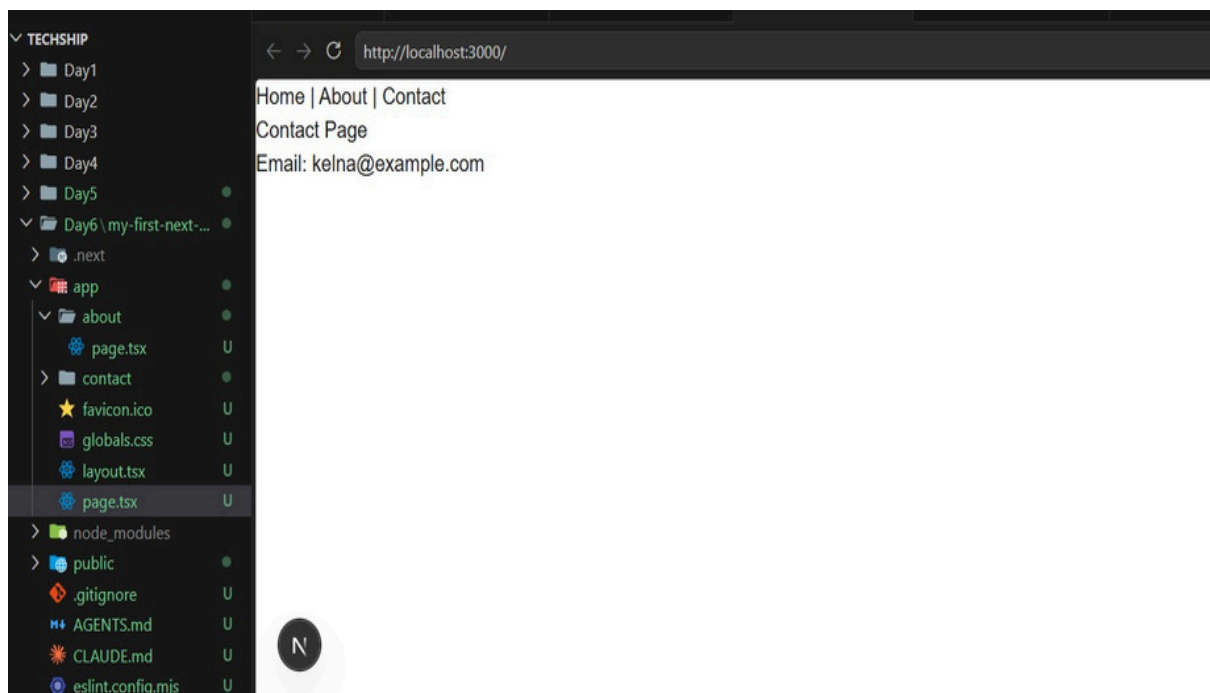

About page

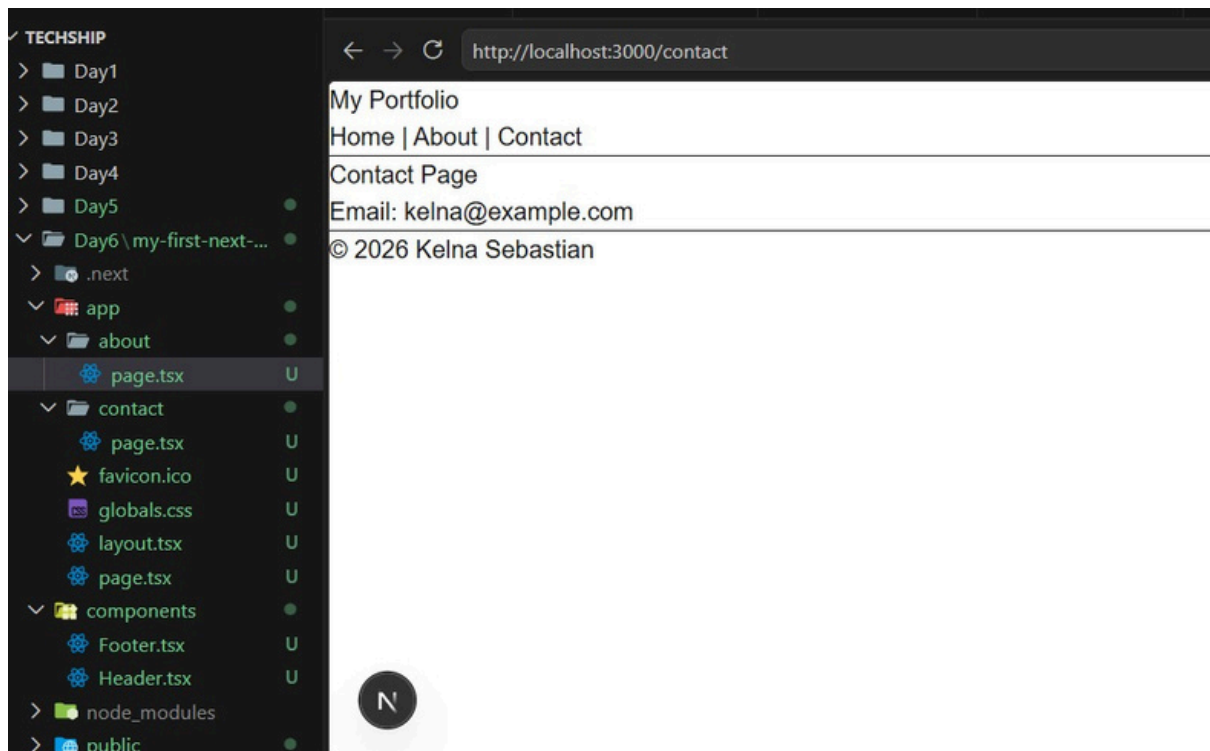

Homepage

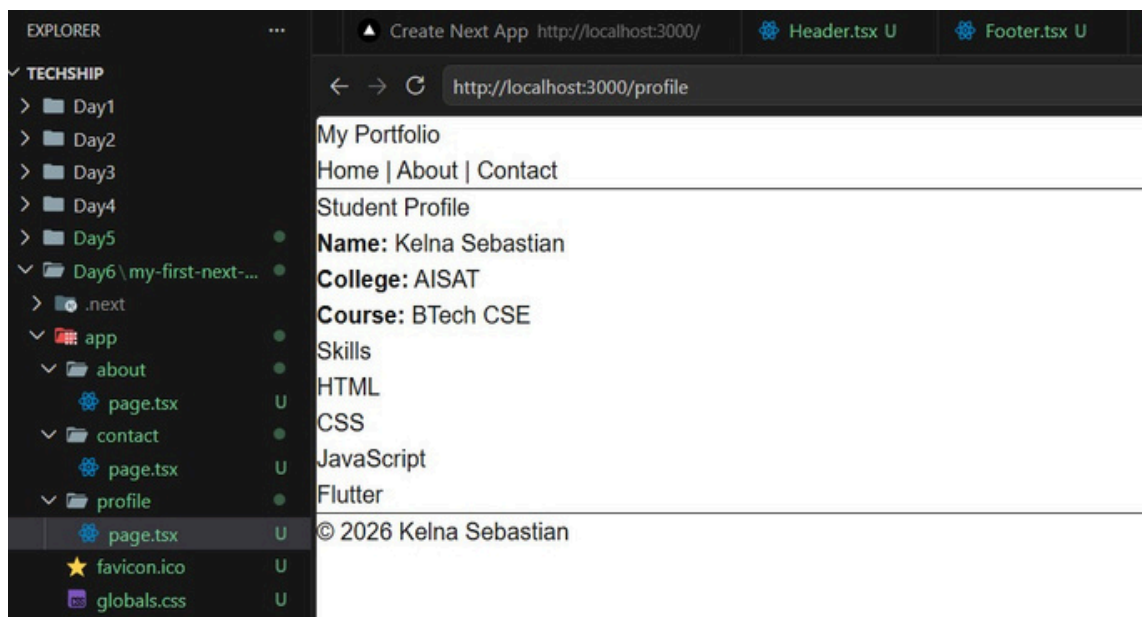

Activity 3-Navigation Menu

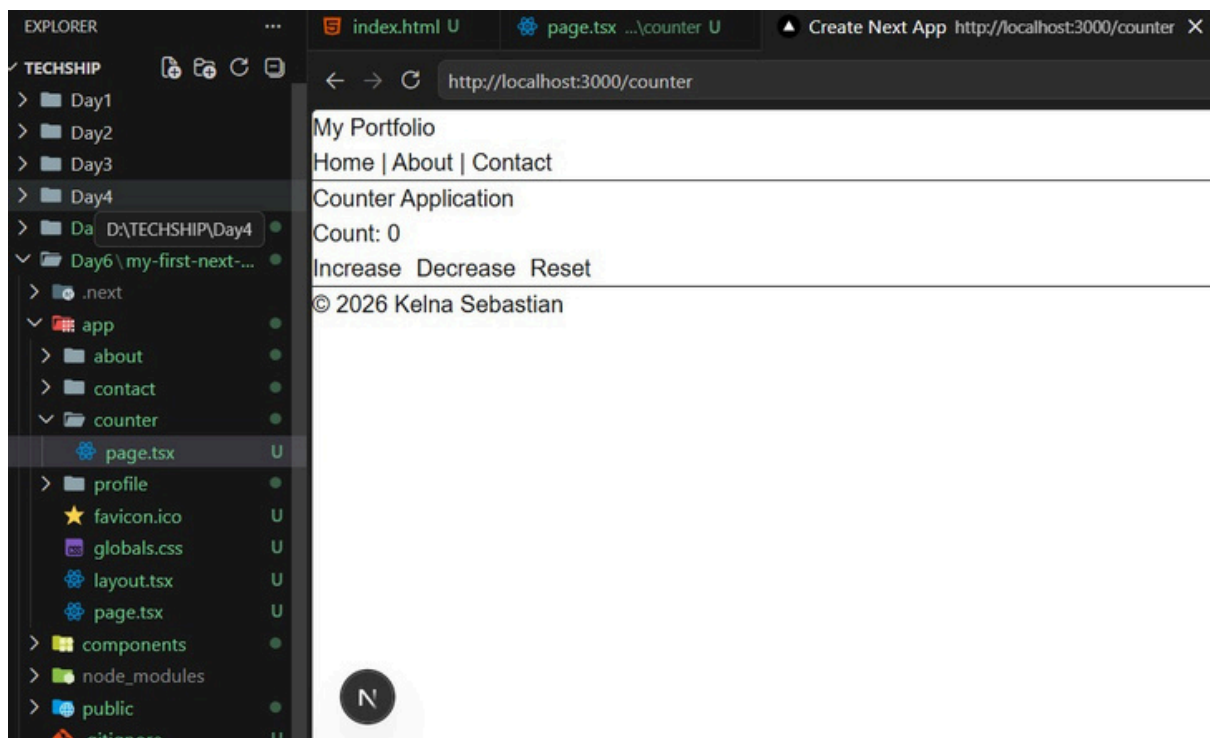

Activity 4-Create Reusable Components

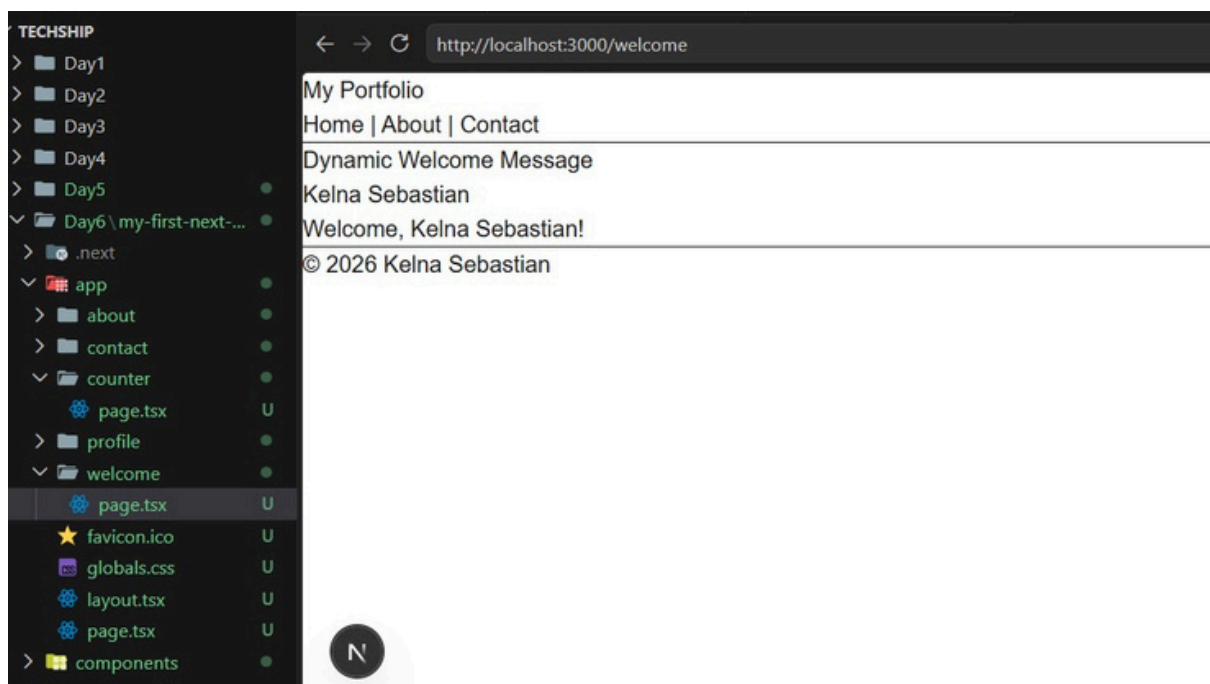

Activity 5-Student Profile Page

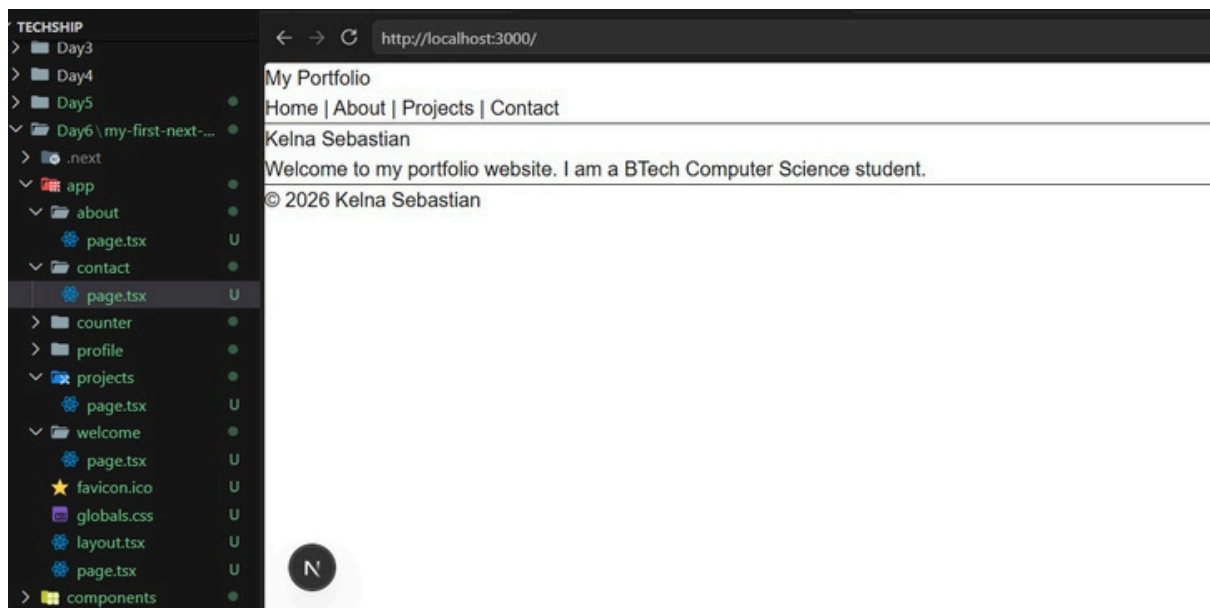

Activity 6-Counter Application

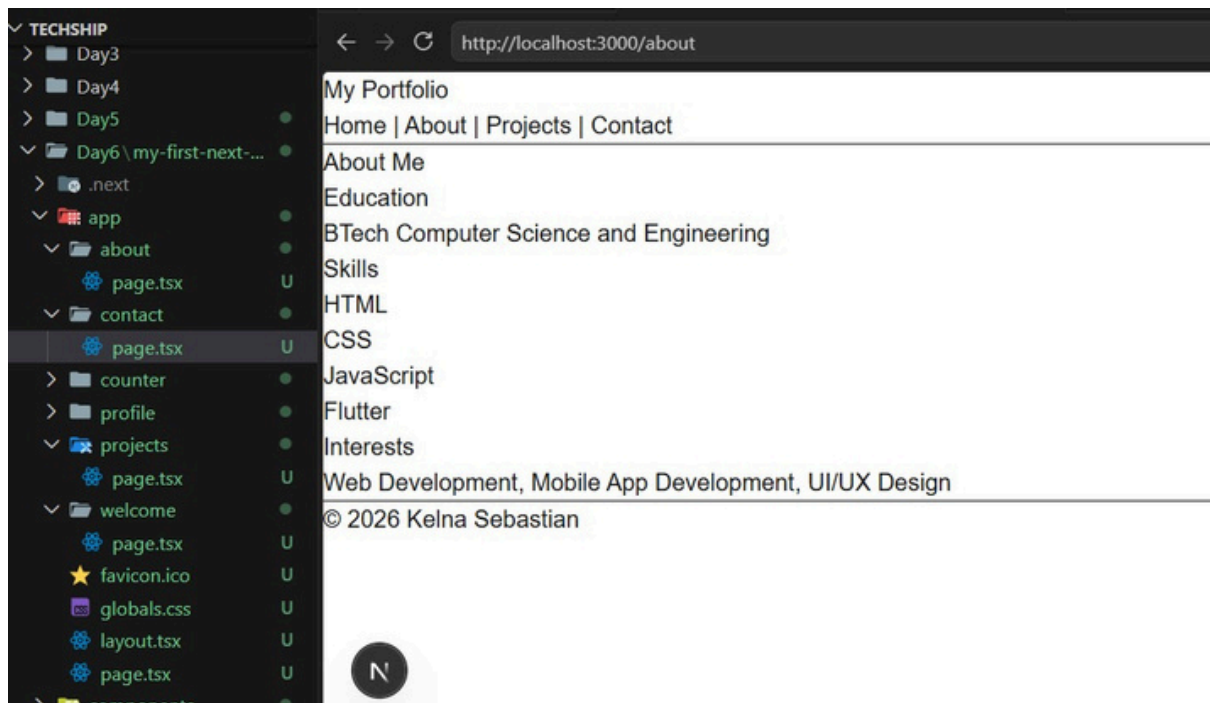

Activity 7-Dynamic Welcome Message

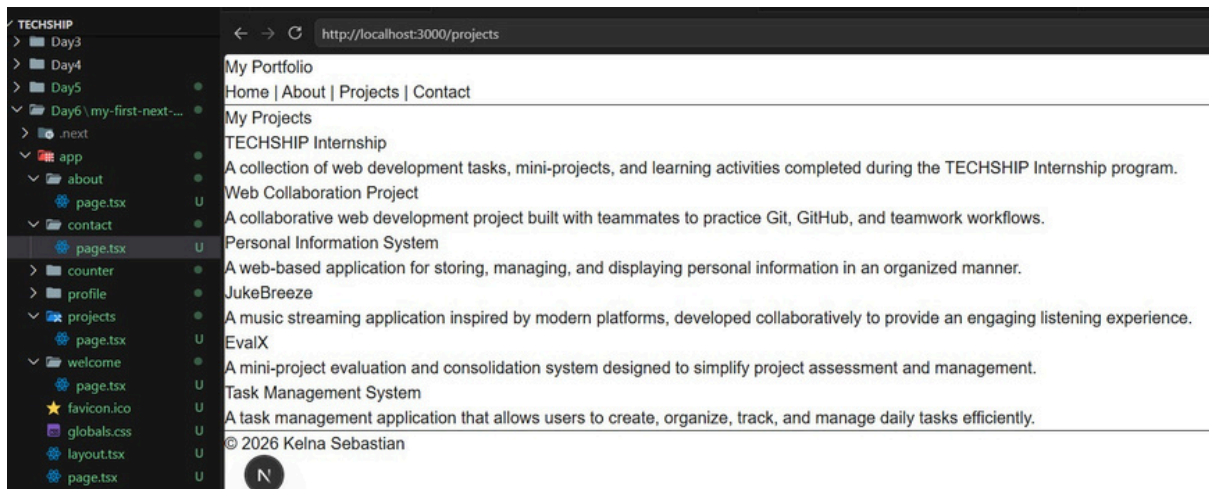

Mini Project
